Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-32 drawn to polypeptides classified in class 530 subclass 300 and 350*.
- II. Claims 33-51 drawn to nucleic acid classified, as example, in class 536 subclass 23.1; in class 435 subclass 410; in class 800 subclass 278 and 298.

The inventions are distinct, each from the other because:

Invention I and drawn II are drawn to products having materially different and separate uses. The protein of invention I can be used as an antigen for production of an antibody and the nucleic acid of invention II can be used to produce a transgenic plant. Further invention I is not needed for the implementation of invention II, and vice versa.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and also by their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
